Corrections and  
Community Supervision

## You deserve a clean, healthy and safe environment.

**Asbestos, lead and mold can lead to serious health issues. The only way to know if your business has these hazards is to have it analyzed by professionals. For information on removing these hazards, please contact Corcraft. Our staff has more than 25 years of experience in providing safe and healthy surroundings.**

### Asbestos

Asbestos can refer to any combination of fibers known for their heat and flame resistance, indestructible qualities and strength. Asbestos was used for decades in the development of thousands of products. It can be found in roofing and siding shingles, insulation, textured paint and patching compounds, vinyl floor tiles and pipe insulation.

Although asbestos was banned by the Environmental Protection Agency (EPA) in the 1970s, it is still found in many commercial settings. It continues to pose a health risk. Persons exposed to asbestos have developed life-threatening illnesses, including cancer.

### Lead

Lead-based paint has been banned in the United States since 1978, however it is still on walls and woodwork in many older buildings. Other sources of lead include lead pipes, brass plumbing fixtures and copper pipes soldered with lead.

Signs and symptoms of prolonged lead exposure in adults include high blood pressure, joint and muscle pain, memory/concentration issues, headache, abdominal pain and reproductive issues.

### Mold

Molds are found in virtually every environment and can be detected, both indoors and outdoors, year round. Mold growth is encouraged by warm and humid conditions. Indoors they can be found where humidity levels are high.

Some people are sensitive to molds. For these people, exposure can cause nasal stuffiness, eye irritation, wheezing or skin irritation. People with serious allergies to molds may have fever and shortness of breath. Others with chronic lung illnesses, such as obstructive lung disease, may develop mold infections in their lungs.

### How We Can Help

Our certified experts follow New York State, Environmental Protection Agency (EPA) and Occupational Safety and Health Administration (OSHA) standards to ensure complete and safe removal. We provide free estimates, and our proposals detail the entire scope of work.

Contact Corcraft, and we will send a supervisor out for a free assessment. Subsequent work is performed by trained and licensed incarcerated individual workers under direct supervision.

You can feel confident that all abatement work is conducted according to the rules and regulations set forth by federal, state and local regulatory agencies.

### Benefits of Using Corcraft

- 25+ years of experience
- NYS-licensed workers and supervisors
- Use of high-quality equipment
- Statewide service available (customers include schools/colleges, county/state agencies, etc.)
- Competitive Pricing
- You're supporting a program that provides incarcerated individuals with marketable skills and possible employment upon release
